

Class: XIth Subject: BIOLOGY

Date: DPP No.: 2

## **Topic :- Transport in Plants**

- 1. Water potential and osmotic potential of pure water is
  - a) Zero and zero
- b) 100 and zero
- c) 100 and 100
- d) Zero and 100
- 2. When pea seeds and wheat seeds are put in water, which of the two will imbibe more water?
  - a) Wheat seeds

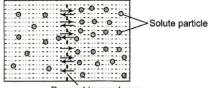

- b) Pea seeds
- c) Both will imbibe equal amount of water
- d) Pea seeds imbibe water only at alkaline pH
- 3. Nyctinasty and seismonasty in plants like bean and touch me not are produced due to
  - a) Reversible osmotic potential in the cells
  - b) Reversible turgor pressure in the cell of their pulvini
  - c) Due to less pressure potential in the cells
  - d) Presence of less turgidity in the cells
- 4. Following statements are related with the diffusion of coloured molecules across a membrane. Select the correct statement, which shows the fastest rate of diffusion?
  - a) An internal concentration of 15% and external concentration of 10%
- concentration of 50%
- c) An internal concentration of 50% and external concentration of 25%
- d) Both (b) and (c) shows fastest rate of diffusion

b) An internal concentration of 25% and external

- 5. Choose the false statement
  - a) If bark of tree is girdled from main stem, the plant dies because ascent of sap is stopped
  - b) If xylem is girdled from main stem, wilting of leaves tales place
  - c) In the flowerering plant food is transported in the form of dissacharide sucrose
  - d) In Girdling experiment, in a plant, root dies first
- 6. Sunken stomata is found in the leaves of
  - a) *Trifolium*
- b) *Lemma*
- c) *Nerium*
- d) Lilium

- 7. Who proposed cohesion theory of water movement in plants?
  - a) JC Bose

- b) Priestly
- c) Dixon and Jolly
- d) TV Englemann
- 8. Study the following picture and the statements given below and choose the correct option

Permeable membrane

I. The above diagram shows the net movement of water from the dilute to concentrated solution

## Smart DPPs

	II. The two solutions are separ III. Water molecule strikes the IV. Diffusion of water does not a) I, II, III and IV by	e membrane randomly on b	oth the sides and pass throu	0
9.	Read the following statements and choose the correct option given below I. Major account of transpiration takes places through surface/margin of leaves II. A little amount of water is lost through stem, this is reffered to cauline transpiration III. Transpiration is comparatively a slow process then evaporation IV. Transpiration driven ascent of sap does not depend on cohesion, adhesion and surface tension process.			
	a) I, II, III and IV	) I, III and II	c) I, II and IV	d) II, III and IV
10.	Direction of translocation o  a) Upward by	f organic foo <mark>d or solut</mark> es, ) Downwa <mark>rd</mark>	, is c) Radial	d) All of these
11.	The water available to plant a) Gravitational water c) Capillary water	ts for absorption is	b) Hygroscopic water d) Chemically bound wate	er
12.	Which of the following theo  a) ABA theory  c) Starch glucose theory	ory gives the latest explar	nation for the closure of st b) Munch theory d) Active K <sup>+</sup> transport the	
13.	What will be the effect of aca) Water potential increase		guard cells? b) Water potential decrea	ases
	c) Loss of turgidity		d) Exosmosis	
14.	<ul> <li>Why all the minerals present in soil can not be passively absorbed by roots?</li> <li>a) Mineral existence as ions is more than absorption</li> <li>b) Due to less concentration of ion in root interior than soil</li> <li>c) Due to more concentration of ions in root interior than in soil</li> <li>d) None of the above</li> </ul>			SN
15.	Which one is not the job of zon a) Mineral uptake b	ne of cell differentiation in ) Wa <mark>ter</mark> uptake	roots? c) CO <sub>2</sub> uptake	d) O <sub>2</sub> uptake
16.	Which one is against the the a) Pores in treachery eleme c) Adhesion force of water in	ents	n by Dixon and Jolly? b) Cohesion force of wate d) Requirement of ATP	r molecules
17.	Attraction of water molecula Cohension by	es to polar surfaces is kn ) Capillarity	own as c) Surface tension	d) Adhesion
18.	The epidermal trichomes he a) Transpiration and exchanc) Protection and reduction	nge of gases	<ul><li>b) Protection from desicc</li><li>d) Exudes water drops from</li></ul>	
19.	In land plants, the guard cel a) Mitochondria	lls differ from other epid	ermal cells in having b) Endoplasmic reticulun	1

c) Chloroplasts

- d) Cytoskeleton
- 20. The values of osmotic potential  $(\pi)$  and pressure potential  $(\rho)$  of cells A, B, C and D are given below.

Cell	π	ρ
Α	-1.0	0.5
В	-0.6	0.3
С	-1.2	0.6
D	-0.8	0.4

Identify the correct sequence that shows the path of movement of water from among the following. a)  $D \to C \to A \to B$  b)  $B \to D \to A \to C$  c)  $B \to C \to D \to A$  d)  $C \to B \to A \to D$ 

## SMARTLEA COACHING
