

## DPP

DAILY PRACTICE PROBLEMS

**CLASS : XIth**  
**DATE :**

**SUBJECT : MATHS**  
**DPP NO. :3**

### Topic :-PRINCIPLE OF MATHEMATICAL INDUCTION

- $(2^{3n} - 1)$  will be divisible by  $(\forall n \in N)$   
a) 25                                      b) 8                                      c) 7                                      d) 3
- If  $n \in N$ , then  $x^{2n-1}y^{2n-1}$  is divisible by  
a)  $x + y$                                       b)  $x - y$                                       c)  $x^2 + y^2$                                       d) None of these
- If  $x^{2n-1} + y^{2n-1}$  is divisible by  $x + y$ , if  $n$  is  
a) A positive integer                                      b) An even positive integer  
c) An odd positive integer                                      d) None of the above
- If  $m, n$  are any two odd positive integer with  $n < m$ , then the largest positive integers which divides all the numbers of the type  $m^2 - n^2$  is  
a) 4                                      b) 6                                      c) 8                                      d) 9
- If  $x^n - 1$  is divisible by  $x - k$ , then the least positive integral value of  $k$  is  
a) 1                                      b) 2                                      c) 3                                      d) 4
- If  $n$  is a positive integer, then  $5^{2n+2} - 24n - 25$  is divisible by  
a) 574                                      b) 575                                      c) 675                                      d) 576
- For all  $n \in N$ ,  $3^{3n} - 26^n - 1$  is divisible by  
a) 24                                      b) 64                                      c) 17                                      d) 676
- Matrix  $A$  is such that  $A^2 = 2A - I$  where  $I$  is the identity matrix, then for  $n \geq 2$ ,  $A^n$  is equal to  
a)  $nA - (n-1)I$                                       b)  $nA - I$                                       c)  $2^{n-1}A - (n-1)I$                                       d)  $2^{n-1}A - I$
- If  $a_1 = 1$  and  $a_n = na_{n-1}$  for all positive integer  $n \geq 2$ , then  $a_5$  is equal to  
a) 125                                      b) 120                                      c) 100                                      d) 24
- For all  $n \in N$ ,  $1 + \frac{1}{\sqrt{2}} + \frac{1}{\sqrt{3}} + \dots + \frac{1}{\sqrt{n}}$  is  
a) Equal to  $\sqrt{n}$   
b) Less than or equal to  $\sqrt{n}$   
c) Greater than or equal to  $\sqrt{n}$   
d) None of these
- Let  $P(n): n^2 + n + 1$  is an even integer. If  $P(k)$  is assumed true  $\Rightarrow P(k + 1)$  is true. Therefore,  $P(n)$  is true  
a) For  $n > 1$                                       b) For all  $n \in N$                                       c) For  $n > 2$                                       d) None of these

12.  $2^{3n} - 7n - 1$  is divisible by  
a) 64                      b) 36                      c) 49                      d) 25
13. For all  $n \in N$ ,  $3n^5 + 5n^3 + 7n$  is divisible by  
a) 3                      b) 5                      c) 10                      d) 15
14. If  $n$  is a positive integer, then  $n^3 + 2n$  is divisible by  
a) 2                      b) 6                      c) 15                      d) 3
15. For all  $n \in N$ ,  $49^n + 16n - 1$  is divisible by  
a) 64                      b) 8                      c) 16                      d) 4
16. If  $P(n)$  is a statement such that  $P(3)$  is true. Assuming  $P(k)$  is true  $\Rightarrow P(k + 1)$  is true for all  $k \geq 3$ , then  $P(n)$  is true  
a) For all  $n$                       b) For  $n \geq 3$                       c) For  $n > 4$                       d) None of these
17. If  $n$  is an odd positive integer, then  $a^n + b^n$  is divisible by  
a)  $a + b$                       b)  $a - b$                       c)  $a^2 + b^2$                       d) None of these
18. The  $n$ th terms of the series  $3 + 7 + 13 + 21 + \dots$  is  
a)  $4n - 1$                       b)  $n^2 + 2n$                       c)  $n^2 + n + 1$                       d)  $n^2 + 2$
19. If  $a, b$  are distinct rational numbers, then for all  $n \in N$  the number  $a^n - b^n$  is divisible by  
a)  $a - b$                       b)  $a + b$                       c)  $2a - b$                       d)  $a - 2b$
20.  $x(x^{n-1} - na^{n-1}) + a^n(n - 1)$  is divisible by  $(x - a)^2$  for  
a)  $n > 1$                       b)  $n > 2$                       c) All  $n \in N$                       d) None of these
