DPP No. :3

|    | Topic :-Application of Derivatives  |   |                            |                            |  |  |  |
|----|---|---|----------------------------|----------------------------|--|--|--|
| 1. | The set $\{x^3 - 12x : -3 \le$  | $\leq x \leq 3$ } is equal to                 |                            |                            |  |  |  |
|    |   | b) $\{x: -12 \le x \le 12\}$                  | 100                        | d) ${x: 0 \le x \le 10}$   |  |  |  |
| 2. | If $xy = a^2$ and $S = b^2x + c^2y$ where $a$ , $b$ and $c$ are constants, then the minimum value of $S$ is   |   |                            |                            |  |  |  |
|    | a) <i>abc</i>   | b) $\sqrt{a} \ bc$                            | c) 2abc                    | d) None of these           |  |  |  |
| 3. | Let g(x) = f(x) + f'(1)   | $-x$ ) and $f''(x) < 0.0 \le x$               | ≤ 1. Then                  |                            |  |  |  |
| 4. | b) $g(x)$ decreases on $[0, g(x)]$ increases on $[0, g(x)]$ increases on $[0, g(x)]$  | 1]<br>1/2] <mark>and decreases on [1</mark> / |                            | -x                         |  |  |  |
|    | a) Strictly increasing in   | the interval $\left(\frac{1}{2},2\right)$     | b) Increasing in the inte  | rval (0,∞)                 |  |  |  |
|    | c) Decreases in the inte  | (2 )  | d) Strictly decreasing in  | the interval $(1, \infty)$ |  |  |  |
| 5. | has in (0, 1)   |   | $a_0x^n + a_1x$            |                            |  |  |  |
|    |   | b) At most one zero                           | c) Only 3 zeros            | d) Only 2 zeros            |  |  |  |
| 6. | A particle is moving along the curve $x = at^2 + bt + c$ . If $ac = h^2$ , then the particle would be   |   |                            |                            |  |  |  |
|    | moving with uniform   |   |                            |                            |  |  |  |
|    | a) Rotation   | b) Vel <mark>ocity</mark>                     | c) Acceleration            | d) Retardation             |  |  |  |
| 7. | The approximate value   | of $(33)^{1/5}$ is                            |                            |                            |  |  |  |
|    | a) 2.0125   | b) 2.1  | c) 2.01                    | d) None of these           |  |  |  |
| 8. | At an instant the diagonal of a square is increasing at the rate of 0.2cm/sec and the area is increasing at the rate of 6cm <sup>2</sup> /sec. At that moment its side is |   |                            |                            |  |  |  |
|    | a) $\frac{30}{\sqrt{2}}$ cm   | b) 30√2 cm                                    | c) 30 cm                   | d) 15 cm                   |  |  |  |
| 9. | v —   | _   | etres vertically upwards i | n $t$ seconds where $x =$  |  |  |  |

## Smart DPPs

|     | COACHING   |                                     |                  |                    |  |  |  |
|-----|--|-------------------------------------|------------------|--------------------|--|--|--|
|     | a) 200 m   | b) 125 m                            | c) 160 m         | d) 190 m           |  |  |  |
| 10. | The intercepts made by the tangent to the curve $y = \int_0^x  t  dt$ , which is parallel to the line                        |                                     |                  |                    |  |  |  |
|     | y = 2x, on y-axis are equal to   |                                     |                  |                    |  |  |  |
|     | a) 1, $-1$   | b) -2,2                             | c) 3             | $_{ m d)}$ $^{-3}$ |  |  |  |
| 11. | The function $f(x) = \tan x$   | x - x                               |                  |                    |  |  |  |
|     | <ul><li>a) Always increases</li><li>b) Always decreases</li><li>c) Never decreases</li><li>d) Some times increases</li></ul> | and some times decreases            | S                |                    |  |  |  |
| 12. | The maximum value of <i>x</i> a) 8   | y subject to $x + y = 8$ , is b) 16 | c) 20            | d) 24              |  |  |  |
| 13. | The tangent to the curve $y = 2x^2 - x + 1$ is parallel to the line $y = 3x + 9$ at the point                                |                                     |                  |                    |  |  |  |
|     | a) (3, 9)  | b) (2, -1)                          | c) (2, 1)        | d) (1, 2)          |  |  |  |
| 14. | 4x - 3y + 2 = 0 is given by  |                                     |                  |                    |  |  |  |
|     | a) (2, 4)  | b) $(1, \sqrt{2})$                  | c) $(1/2, -1/2)$ | d) $(1/8, -1/16)$  |  |  |  |
| 15. | If the parametric equation of a curve given by $x = e^t \cos t$ , then the tangent   |                                     |                  |                    |  |  |  |
|     | curve at the point $t = \pi/4$ makes with axis of $x$ the angle  |                                     |                  |                    |  |  |  |
|     | a) 0   | b) π/4                              | c) π/3           | d) $\pi/2$         |  |  |  |
| 16. | All points on the curve $y^2 = 4a\left(x + a\sin\frac{x}{a}\right)$ at which the tangents are parallel to the axis of        |                                     |                  |                    |  |  |  |
|     | lie on a<br>a) Circle  | b) Parabola                         | c) Line          | d) None of these   |  |  |  |
| 17. | The point of inflexion for the curve $y = x^{5/2}$ is  |                                     |                  |                    |  |  |  |
|     | a) (1, 1)  | b) (0, 0)                           | c) (1, 0)        | d) (0, 1)          |  |  |  |
| 18. | The minimum value of $2x + 3y$ , when $xy = 6$ , is  |                                     |                  |                    |  |  |  |
|     | a) 12  | b) 9                                | c) 8             | d) 6               |  |  |  |
| 19. | If $(x) = x^2 - 2x + 4$ on [1, 5], then the value of a constant $c$ such that $\frac{f(5) - f(1)}{5 - 1} = f'(c)$ , is       |                                     |                  |                    |  |  |  |
|     | a) 0   | b) 1                                | c) 2             | d) 3               |  |  |  |

20. Let a, b be two distinct roots of a polynomial f(x). Then there exists at least one root lying between a and b of the polynomial

a) f(x)

b) f'(x)

c) f''(x)

d) None of these
